Introduction

Orbit is a complete HR and payroll platform for growing companies. It brings every part of managing people — records, attendance, leave, payroll, compliance, tax, performance, hiring, letters and exits — into one secure system used by company admins, HR, finance, managers and employees, and by HR agencies that manage several companies.

Everything is connected. Attendance and leave feed payroll. Payroll feeds statutory returns, tax and the full and final settlement. Approved reviews update salaries and generate letters. Information is entered once and used everywhere, which removes the re-typing that causes most HR and payroll errors.

Orbit at a glance

Module	What it covers
Core HR & people	Employee records, org chart, departments, onboarding
Time & attendance	Check-in/out, shifts, holidays, half days and absences
Leave	Your own leave policies, balances and approvals
Payroll	Salaries, payslips, payroll run, bank transfer file
Statutory compliance	PF, ESI, professional tax, LWF and the return files
Income tax (TDS)	Declarations, proofs, monthly TDS, Form 124 and Form 130
Performance	Review cycles, goals, ratings, hikes and promotions
Recruitment	Job openings, candidate pipeline, offer letters
Letters & documents	Ready-made letter library, letterpad, signatures, e-sign
Exits & settlement	Exit approval, clearance checklist, full and final
Expenses	Claims, approval and reimbursement
Helpdesk	Employee tickets for HR, payroll and IT queries
Company documents & announcements	Policies everyone can read, company news
Inbox & approvals	One place for every request waiting on you
Employee & manager self-service	Me hub for staff, My team for managers
Dashboard, insights & AI assistant	Live numbers, charts, search and plain-English answers
Roles, security & control	Custom roles, data security, subscription and billing
For HR agencies	Manage many client companies and their subscriptions from one screen
Coming soon	Mobile app, biometric devices, WhatsApp, compliance calendar and more

Who uses Orbit

Orbit is used at several levels. Each person sees exactly what their role allows, and nothing more.

Role	Who it is for	What they can do
HR agency	HR firms and consultants who manage several client companies	Add client companies and their admins; see every client's employees, seats, cost and subscription status as company-level summaries
Company admin	The person in charge of Orbit for a company: founder, director or head of HR	Full control of their own company: people, roles and permissions, company settings, payroll, letters, subscription and billing
HR	The HR and payroll team	Manage employee records, attendance, leave, payroll, tax, letters, reviews, recruitment, exits and helpdesk
Manager	Anyone with people reporting to them, at any level	See and approve for their downline only: the people who report to them directly or through their own managers
Employee	Every member of staff	Self-service for their own attendance, leave, payslips, tax, goals, review, letters and requests

How the downline works

Visibility follows your org chart. A manager sees and approves the attendance, leave, expenses and reviews of the people below them in the reporting line, and of no one else. A team lead with two people sees two people. A department head sees the whole department, including the people under each team lead.

Company admins can also create their own roles, for example "Payroll officer" or "Regional HR", and choose exactly what each role can do. Each permission applies either to the whole company or only to the person's own downline.

Features and how they help you

1. Core HR & people

One accurate record for every employee, which every other module builds on.

WHAT'S INCLUDED

- **Employee directory** — searchable and paged, so it stays fast at 1,000+ employees
- **Employee profiles** — personal, job, bank and statutory details, with salary and bank data masked from people who should not see it
- **Org chart** — the reporting tree, which also decides what each manager can see and approve
- **Departments and designations** — set up once and reused in letters, reports and payroll
- **Onboarding checklists** — default tasks for every new joiner, with HR able to add more
- **People & invites** — add employees and send them a welcome email with their sign-in details
- **Holidays** — a company holiday calendar that fills attendance automatically

How this helps you

✓ No more spreadsheets of employee data that drift out of date.

✓ New joiners get access on day one, and the onboarding steps aren't missed.

✓ Managers see only their own team, so sensitive data stays where it belongs.

2. Time & attendance

Attendance that measures the actual working day and flows straight into pay.

WHAT'S INCLUDED

- **Check-in and check-out** — multiple sessions a day (lunch and breaks are handled), with gross and effective hours
- **Required hours** — taken from the employee's shift or the company's standard day, which the admin sets
- **Automatic half day and absent** — a short day counts as a half day; no check-in and no leave counts as absent. Both feed loss of pay
- **Shift scheduling** — shift templates and a weekly roster grid
- **Team day sheet and month grid** — who is present, on leave, absent or not in yet, by department
- **Regularization requests** — employees fix a missed punch with a reason; managers approve
- **Bulk corrections** — HR or managers correct many people across many dates in one step
- **Forgotten check-out reminder** — sent by email and to the inbox the next morning, with the correction form already filled in
- **Timezone-aware** — attendance runs on each employee's local clock (India time by default)

How this helps you

- ✓ Payroll and attendance always agree, so there's no manual reconciliation at month end.
- ✓ Fair, consistent rules for half days and absences, with no arguments over who decided what.
- ✓ Supervisors see their whole team at a glance every morning.

3. Leave management

Your leave policy, written into the system rather than kept in a PDF.

WHAT'S INCLUDED

- **Leave policies per leave type** — paid or unpaid, annual or monthly accrual, configured by your company
- Live leave balances for every employee
- **Leave requests and approvals** — routed to the employee's own manager in the reporting line
- **Compensatory off** — request and approve comp-off for extra days worked
- **Leave calendar** — see who is away before approving
- Leave and holidays feed attendance and payroll automatically

How this helps you

- ✓ Employees apply in seconds and always know their balance.
- ✓ Managers approve with full context, and HR stops chasing approvals.
- ✓ Unpaid leave reaches payroll correctly, with no re-keying.

4. Payroll

Correct salaries every month, from salary structure to the bank transfer.

WHAT'S INCLUDED

- **Configurable payslip template** — your own earnings and deductions, validated before use
- **Salary history by date** — raises apply from their effective date, and joiners and leavers are prorated
- **Payroll run** — the whole month in one screen, including the employer's own cost
- Loss of pay from attendance and unpaid leave, applied automatically
- **Month lock** — finalising a month freezes every payslip exactly as issued, so later changes can't rewrite history
- **Bank transfer file** — generated on the server and checked first. Anyone missing an IFSC or account number is named before you download, never silently left out
- **Branded payslips** — employees view and download their own
- **Salaries and hikes** — full compensation history for every employee

How this helps you

- ✓ Payday is a review-and-approve exercise, not days of spreadsheet work.
- ✓ A locked month means what you paid is exactly what's on record if an auditor or employee asks.
- ✓ The bank won't reject your salary batch because of one bad row.

5. Statutory compliance (India)

The deductions and filing files Indian companies need, built into payroll.

WHAT'S INCLUDED

- **Provident Fund (PF)** — wage ceiling, EPS/EPF split, admin charges and EDLI, with the rates held as settings
- **ESI** — employee and employer shares, the ₹21,000 ceiling applied per contribution period
- **Professional tax** — every state that levies it, including half-yearly and annual bases and state-specific rules
- **Labour Welfare Fund** — state calendars for the states with confirmed amounts
- **Return files** — PF ECR, ESI monthly file, professional tax state summary, LWF summary and Form 24Q Annexure I, all built from finalised months
- **Readiness check** — lists anyone a return can't include (no UAN, no ESI number, no PAN and so on) and the reason
- **Employee enrolment** — HR enrols each employee in PF and ESI and sets their professional tax state from their profile

How this helps you

- ✓ Statutory deductions are calculated the same way every month, not left to memory.
- ✓ Upload-ready files for the government portals cut your filing time sharply.
- ✓ Problems show up before the deadline, not after the portal rejects you.

6. Income tax (TDS)

Tax declarations and monthly TDS, written to the Income-tax Act, 2025.

WHAT'S INCLUDED

- **Guided tax declaration** — nine simple steps, with the old and new regimes priced side by side as the employee fills it in
- **Full deduction coverage** — Section 123 (old 80C) items, health insurance, HRA by month and city, home loans, other income and income from a previous employer
- **Proof submission and HR review** — HR accepts or rejects each claim with a reason
- **Monthly TDS that corrects itself** — a raise or late declaration is spread over the remaining months instead of landing in March
- **Tax computation screen** — explains every rupee: which ceiling applied, what was allowed and why
- **Form 124 (formerly 12BB) and Form 130 (formerly Form 16)** — laid out like the official forms and printable
- **TDS deposits** — record challans and 24Q receipts per month and quarter

How this helps you

- ✓ Employees understand their own tax and pick the better regime with confidence.
- ✓ Fewer "why is my tax so high this month?" questions reach HR and finance.
- ✓ Year-end forms come straight from the system rather than being prepared by hand.

7. Performance management

Structured reviews that end in a clear, documented outcome.

WHAT'S INCLUDED

- **Review cycles** — each with its own question set (ratings and written answers) for the employee, the manager or both
- Self-assessment followed by the manager's review, shown side by side
- **Outcome proposals** — a hike by % or a new salary, a new title and an effective date
- **HR approval** — applies the pay change from the effective date and can issue the increment or promotion letter in the same step
- **Goals and OKRs** — set and tracked per employee
- **Progress by stage** — waiting on self, waiting on manager, to approve, approved

How this helps you

- ✓ Appraisals finish on time, with every rating and decision on record.
- ✓ Approved hikes reach payroll and letters automatically, with no re-entry and no errors.
- ✓ Employees see clear goals and get fair, two-sided reviews.

8. Recruitment

From job opening to offer letter in one flow.

WHAT'S INCLUDED

- **Job openings** — create and manage open roles
- **Candidate pipeline board** — move candidates from applied through each stage to hired
- **Offer letters for candidates** — generated from your templates even though they aren't employees yet, including the salary annexure
- **Candidates sign online** — a secure link lets them accept the offer with no login

How this helps you

- ✓ Every candidate's status is visible to the whole hiring team.
- ✓ Professional offer letters go out in minutes and come back signed.

9. Letters & documents

Every HR letter you issue, on your letterpad, signed and tracked.

WHAT'S INCLUDED

- **Letter library of 24+ templates written to Indian practice** — offer, appointment, confirmation, probation extension, increment, promotion, transfer, bonus, appreciation, salary certificate, experience, relieving, NOC, warning, show-cause, PIP, termination, resignation acceptance, no dues, full and final, internship and more
- **Automatic merge fields** — names, dates, salary annexure (monthly and yearly), amounts in words (lakh and crore) and your company terms
- **Your letterpad in any format** — upload an image, PDF or Word file. Orbit finds the blank writing area, so text never overlaps your header or footer, and handles letters of any length
- **Authorised signatories and company seal** — drawn, typed or uploaded signatures printed on letters automatically
- **Hand edits** — adjust the wording of a letter before issuing it
- Download as PDF or send by email straight from Orbit
- **E-signature acceptance** — employees and candidates read, sign and accept or decline online. Each signature is tamper-checked and recorded with time, IP and browser
- Issued letters are kept and can't be changed afterwards

How this helps you

- ✓ Letters that took an hour each now take a minute, and they look consistent and professional.
- ✓ Fewer errors, because salaries, dates and terms come from the system rather than being typed.
- ✓ Signed acceptance with an audit trail, so there's no more printing, scanning and couriering.

10. Exits & full and final settlement

Exits handled properly, with the settlement worked out rather than typed.

WHAT'S INCLUDED

- **Exit requests with admin approval** — nobody is marked as leaving until an admin approves
- Notice period tracking and an exit clearance checklist
- **Full and final settlement calculated from payroll** — final salary, leave encashment, gratuity (as per the law, capped at ₹20 lakh), notice shortfall and unpaid expense claims
- Extra lines for bonuses, advances or asset recoveries
- Approve, issue the F&F statement letter, and mark it paid with date and reference

How this helps you

- ✓ Settlements are accurate and consistent with the final payslip.
- ✓ Departing employees are paid on time, which protects your reputation and compliance.

11. Expenses

WHAT'S INCLUDED

- **Expense claims** — employees submit claims by category
- Approval by the employee's own manager or HR, then reimbursement
- **Pipeline totals** — see what is pending, approved and paid
- Unpaid approved claims are included in full and final settlement automatically

> **How this helps you**
>
> ✓ No paper bills or email chains, and every rupee is tracked from claim to payment.

12. HR helpdesk

WHAT'S INCLUDED

- Employees raise tickets for HR, payroll or IT questions
- HR queue with assignment, status tracking and threaded replies
- Notifications at every update

> **How this helps you**
>
> ✓ Employee questions stop getting lost in WhatsApp and email, and response times become visible.

13. Company documents & announcements

WHAT'S INCLUDED

- **Company documents** — policies and handbooks written in Orbit or uploaded (PDF, Word, Excel). Everyone can read them; only HR and admins can publish
- Drafts stay hidden until they are published
- **Announcements** — a company feed for news, posts and comments

> **How this helps you**
>
> ✓ Everyone always has the latest version of every policy, in one place.
>
> ✓ Important news reaches the whole company.

14. Inbox, approvals & notifications

WHAT'S INCLUDED

- One inbox with tabs for leave, attendance, comp-off, expenses, tax proofs, exits, tickets and updates, each with a count
- **Decide in place** — approve or reject several requests at once

- Email and in-app notifications for requests, decisions and reminders

> **How this helps you**
>
> ✓ Managers clear their approvals in minutes from one screen.
>
> ✓ Nothing waits unnoticed.

15. Employee & manager self-service

WHAT'S INCLUDED

- **Me hub** — each employee's own attendance, leave, payslips, tax declaration, goals, review and letters
- **My finances** — salary, payslips and tax in one private place
- **My team** — managers see their own team's attendance, leave, reviews and approvals
- **Profile menu** — account settings, password change, language and region

> **How this helps you**
>
> ✓ Routine questions such as "What's my balance?" or "Where's my payslip?" stop coming to HR.
>
> ✓ Managers can manage their teams without asking HR for reports.

16. Dashboard, insights & AI assistant

WHAT'S INCLUDED

- **Role-based dashboard** — present today, on leave, absent, pending approvals, with views for leaders and their teams
- **Insights** — headcount growth, attrition, ratings, leave and expense charts
- **Global search** — find people, letters and documents instantly
- **AI assistant** — ask questions in plain English and get answers from your company's own data, limited to what each person is allowed to see

> **How this helps you**
>
> ✓ Leadership gets live numbers without waiting for a monthly report.
>
> ✓ Answers to everyday HR questions take seconds.

17. Roles, security & control

Built for companies that take their employees' data seriously.

WHAT'S INCLUDED

- **Custom roles and permissions** — choose who sees salaries, runs payroll, approves leave and so on, for the whole company or only their own team

- **Ready-made roles** — Admin, HR, Manager and Employee, which work out of the box
- **Data isolation at the database level** — each company's data is kept completely separate from every other company's
- **Secure sign-in** — signed tokens, enforced password change on first login, and signing out of every other device after a password change
- **Sensitive data masked** — bank account numbers are hidden on screen
- **Language and region** — English, Hindi, Spanish, French and German menus, with personal timezone and date format
- Light and dark themes

> **How this helps you**
>
> ✓ Peace of mind that payroll and personal data are only ever seen by the right people.
>
> ✓ Access matches how your organisation actually works.

18. Subscription & billing

WHAT'S INCLUDED

- **Simple per-employee pricing** — billed per active employee, per month
- **Billing page** — this month's charge, a clear breakdown of how it's calculated, and monthly invoices
- **Subscription page** — seats in use, the paid-until date, and a one-click request for more seats
- **Renewal reminder** — admins get an email and an inbox notice five days before the subscription ends

> **How this helps you**
>
> ✓ You always know what you're paying and why, with no surprise bills.
>
> ✓ Adding seats as you grow takes one request.
>
> ✓ Your subscription never lapses by surprise.

19. For HR agencies and consultants

For HR firms that run HR and payroll for several client companies.

WHAT'S INCLUDED

- **My companies** — every client company in one list, with its admin, employees, seats, monthly cost and subscription status
- **Add a company** — set up a new client company and its first admin in one step; Orbit can create the admin's temporary password
- **Overview at a glance** — total companies, employees, seats used and monthly spend across all clients
- **Subscriptions** — for each client, the status (active, renewing soon, awaiting activation, ended), the paid-until date with days left, seats used against seats bought, the per-person rate, and the monthly and yearly cost

- **Needs attention** — clients whose subscription is ending soon or has ended, is waiting for activation, or has run out of seats, with a request for more seats
- Each client company runs Orbit on its own, with its own admin, HR, managers and employees
- **Client privacy** — the agency view shows company-level figures only (headcount, seats, cost, dates), never any individual employee's data

How this helps you

✓ Manage your whole client book from one screen instead of many logins.

✓ Renewals and seat shortages are spotted before a client is affected.

✓ Your clients can trust that their employees' personal data stays with them.

Coming soon: the Orbit roadmap

Orbit is improving all the time. These features are planned next. Every one has been chosen because it saves our clients time, cuts their costs or reduces their risk. As Orbit is a cloud service, new features appear in your account automatically, with no upgrade project and no reinstall.

Mobile & easier access

Feature	What it does	How it helps you
Orbit mobile app	Check in and out, apply for leave, approve requests and view payslips from a phone	Most employees never open a laptop, so everyone can use Orbit, including field and shop-floor staff
WhatsApp approvals & payslips	Leave requests, approvals and payslip delivery over WhatsApp	Approvals happen in minutes instead of waiting in an email inbox
Google & Microsoft sign-in	Sign in with an existing work account	One less password to remember, and fewer "I'm locked out" calls
Two-factor sign-in for admins	A second step when signing in to accounts that can see salaries	Extra protection for your most sensitive data
Every screen in your language	Hindi, Spanish, French and German across the whole app, not just the menus	Staff who are more comfortable in their own language can use Orbit fully

Attendance & time

Feature	What it does	How it helps you
Biometric device integration	Attendance pulled automatically from ESSL and ZKTeco machines	Factories and multi-shift sites keep the machines they already have, with no double entry
Location-based mobile check-in	Check in from a phone only within approved sites	Accurate attendance for field teams and multiple locations
Automatic overtime & attendance stats	Overtime worked out from hours and paid at statutory rates, with monthly attendance trends	Fair overtime pay with no manual calculation
Timesheets	Time logged against projects and tasks, billable or non-billable	Know where time goes, and bill clients accurately

Leave

Feature	What it does	How it helps you
Leave encashment	Unused leave paid out under your policy	Year-end encashment handled in payroll, not on a spreadsheet
Advanced leave rules	Sandwich-leave rules and leave restrictions during probation	Your exact policy is enforced automatically and consistently

Feature	What it does	How it helps you
Manager leave insights	Team leave patterns as charts, with a short "needs attention" list	Spot burnout or absenteeism early

Payroll & compliance

Feature	What it does	How it helps you
Compliance calendar & reminders	Due dates for PF, ESI, PT, TDS and returns, with reminders	Never miss a statutory deadline or pay a late penalty
Statutory registers	Muster roll and wage registers under the Shops & Establishments and Factories Acts	Inspection-ready records at the click of a button
Flexible benefits	LTA, fuel, phone and meal allowances declared and claimed against bills	Employees save tax legally, which makes the offer more attractive
Expense advances	Money advanced before travel and settled against the claim	No more informal cash advances that are hard to track
Accounting integration (Tally)	Payroll entries posted straight to your books	Finance closes the month faster, with no re-keying
Direct salary payouts	Salaries paid through a bank payout connection instead of uploading a file	Payday becomes one click
Settlement payout in the bank file	The full and final amount included in the salary transfer, with tax on encashment handled	Departing employees are paid in the same run as everyone else
Done-for-you filing	Statutory filing handled with a partner chartered accountant (optional service)	Compliance handled end to end by experts
Aadhaar eSign	Legally stronger Aadhaar-based e-signatures on letters (optional add-on)	Extra assurance for appointment and settlement letters

Engagement & growth

Feature	What it does	How it helps you
Surveys & eNPS	Pulse surveys and an employee Net Promoter Score	Hear from your people before they resign
Rewards & recognition	Kudos, points and badges for good work	A culture where good work is noticed, which helps retention
One-to-ones & continuous feedback	Regular manager check-ins and feedback between review cycles	Fewer surprises at appraisal time
Learning & development	Courses, assignments and completion tracking	Grow skills inside the company and keep training records
Employee referrals	Staff refer candidates and track their progress	Better hires, sooner, at a lower cost
Resume parsing	Candidate details read automatically from uploaded CVs	Recruiters spend less time on data entry

Assets & accountability

Feature	What it does	How it helps you
Asset management	Laptops, phones and ID cards issued, tracked and recovered	Nothing walks out of the door at exit, and the clearance checklist is complete
Audit log	A record of who changed what, such as salaries, roles and bank details, and when	Full accountability, and a ready answer for auditors

The roadmap is shared for planning purposes. The order and scope of upcoming features may change based on client feedback. Tell us what matters most to your business and we will take it into account.

Who benefits, and how

Who	What they gain
HR agencies	One screen for every client company's employees, seats, costs and renewals, while each client's employee data stays private.
Company admins & leadership	Live headcount, cost and attrition numbers; confidence that pay and compliance are right; data kept secure.
HR team	Hours saved every week on letters, approvals, attendance and queries; one system instead of many spreadsheets.
Finance & payroll	Locked payroll months, a validated bank file, statutory return files and correct TDS with year-end forms.
Managers	One inbox for approvals, a My team view, and structured reviews that end in a clear outcome.
Employees	Self-service for attendance, leave, payslips, tax and letters; clear answers without waiting on HR.

Why companies choose Orbit

- **One connected system** — attendance, leave, payroll, tax and letters share the same data, so there's nothing to reconcile
- **Built for India** — PF, ESI, professional tax, LWF, TDS under the Income-tax Act 2025, and Indian letter formats
- **Explains itself** — payslips, tax computations and settlements show how every figure was reached
- **Secure by design** — database-level separation between companies, custom roles and masked sensitive data
- **Keeps getting better** — new features appear in your account automatically, with no upgrade project
- **Fast to start** — your workspace is ready the moment it's created, and employees get sign-in details by email
